# Supremecoat Ceramic Paint Protection

When examined under a microscope, the paint surface of your motorcycle has a rough cross-section consisting of peaks and valleys. Over time dirt and contaminants get trapped within the paint surface, eventually causing the paint surface to oxidise and fade.

## How does Supremecoat Ceramic work?

When applied to your motorcycle's paintwork, Supremecoat's polysilazane formulation interlocks its molecular structure to the motorcycle's paintwork, filling any imperfections and creating a highly durable high gloss ceramic protective barrier. This ceramic barrier adds protection against the sun's UV rays, acid rain, road salts, tree sap and environmental pollutants. Supremecoat Ceramic now gives you the freedom and choice of how you want to have your motorcycle cleaned, even jet washes can be used without the risk of invalidating your guarantee.

# What is Paint Protection?

Paint protection is nothing new, it's been around for over 40 years. The concept of paint sealant is to protect your motorcycle's paintwork finish from deteriorating, which is caused by the harmful chemicals that are contained in today's environment such as road salt, chemical fallout and acid rain which all contribute to damaging the surface and paint finish of your motorcycle. Most paint protection products only use polymer based paint sealants. These sealants are often less effective than products you can buy off the shelf in well-known auto parts stores. They are based on technology developed two decades ago: amino functional fluids, which plasticize as they dry. This creates a temporary, sacrificial, soft layer on the paint surface which can wash off within 2-3 months. That is why many competing products require you to apply a preserver application every six months to a year.

# What Makes Supremecoat Ceramic Different?

Supremecoat Ceramic is formulated from advanced nano-ceramic technology. Our paint protection is a high gloss permanent bond nano-ceramic coating that can only be applied by our trained approved applicators and is backed up by a 10 or 7 year guarantee, compared to factory paintwork it utilises the latest ceramic nano-technology to give your paintwork superior chemical resistance, UV & thermal resistance and hydrophobic effects.

Water beads up on the paint surface and sheets off

## Paint Protection Against

- Paint fading
- Loss of shine
- Acid rain
- Bird droppings
- Tree sap
- Insects
- Hard water stains

## Benefits of Supremecoat Paint Protection

- ✓ Superior adhesion
- ✓ UV resistant
- ✓ Resistant to environmental fallout
- ✓ High gloss finish
- ✓ Protect your bike's re-sale value
- ✓ Easy to clean

\*10 Year warranty for new bikes & 7 year warranty for used bikes. Warranty does not provide cover in the event of neglect, misuse, stone chips or scratches.
